HERMISTON CITY COUNCIL

Goal Setting Retreat

January 22 & 23, 2021

Mayor Drotzmann called the Goal Setting Meeting for Friday, January 22, 2021 to order at 6:00pm. Present were Councilors Primmer (arrived at 6:15pm), Peterson (via Zoom), Spicerkuhn, Hardin, Myers, Davis, and Barron were present. Councilor Duron was excused. Staff members in attendance were City Manager Byron Smith, Assistant City Manager Mark Morgan, Finance Director Mark Krawcyzk, Library Director Mark Rose, Parks and Recreation Director Larry Fetter, Chief Edmiston, Planning Director Clint Spencer, Court Manager Mollie Croisan, Energy Services General Manager Nate Rivera, and City Recorder Lilly Alarcon-Strong.

Sara Singer Wilson from SSW Consulting, LLC outlined the agenda for the evening. Attendees briefly introduced themselves.

Presentations were made by staff members to update the council on the status of projects from the 2020 goals, a look ahead at 2021 projects and potential projects. The presentations included project progress, accomplishments, challenges, and relevant data (presentations attached).

After Council and staff discussion, the meeting adjourned for the evening at 8:25pm.

Mayor Drotzmann called the Goal Setting Meeting for Sture'y, January 23, 2021 to order at 9:00am. Present were Councilors Primmer, Peterson (via Zoom), Screkuhn, Hardin, Myers, Davis, and Barron (arrived at 6:03pm) were present. Councilor Downwas excered. Staff members in attendance were City Manager Byron Smith, Assistant City Manager Iv Morgan, Finance Director Mark Krawcyzk, Library Director Mark Rose, Parks and Pecreation Director Larry Fetter, Chief Edmiston, Planning Director Clint Spencer, Court Manager Mora Croix n, Energy Services General Manager Nate Rivera, and City Recorder Lilly Alarcon-Strom.

Ms. Singer Wilson reviewed the loas a stopics, as discussed the day prior, of the 2021 projects and potential projects, and help ad development the load mapping of those and other topics.

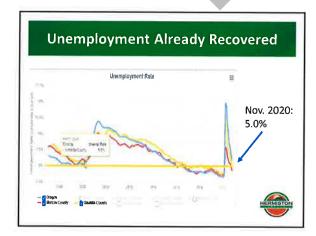

Attendees were placed in six il group to continue expanding on these topics which included mapping out the most pressing issue. for any Hermiston, organizing priorities and initiatives, identifying overarching goals to refine the actions/goals for 2021. The goals for 2021 include: Convene regular conversations on Mental Health; Explore broadband/fiber to support City facilities; Complete City Hall, Library, ADA access and improved accessibility; Improve two-way communication; EOTEC; and more.

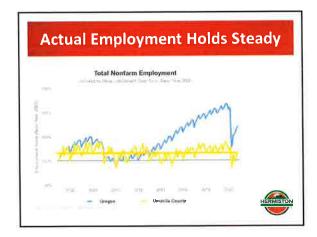

The meeting was adjourned at 3:15pm.

	SIGNED:
	Dr. David Drotzmann, MAYOR
ATTEST:	
Lilly Alarcon-Strong,	CMC, CITY RECORDER

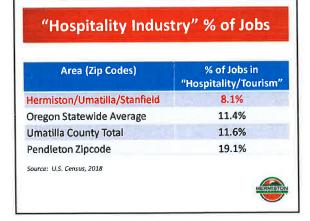

"Tourism" is Risky & Costly

- Tourism Spending is co-cyclical with recessions
- · Lack of catalytic tourism asset
 - Ski Resort, Navigable Lake, Tribal Casino, etc.
- Presence of Higher-Return assets
 - High-value/processing crops
 - PNW Fiber & Power Infrastructure
 - Transportation Infrastructure

Local Hospitality Industry Growing

- 2,000 Net Jobs added 2008-2018
 - "Hospitality's" share grew from 7.5% to 8.1%
- Developments 2008 to 2018
 - EOTEC
 - Maxwell Event Center
 - Holiday Inn Express (96 rooms), Comf . Inn & Suites (80 rooms), Travelodge (16 roc

COVID-19 Economic Response from City of Hermiston?

Where Life is Sweet

Local Response Decision Factors

- Low Exposure to Hardest-Hit Industries
- · Extremely fast employment rebound
- · Federal Actions Massive, Fast, & Blunt
 - Paycheck Protection Program
 - Supplemental Unemployment Benefit
 - Direct Stimulus Payments

\$600/wk Extra Unemployment

- "Blunt": \$600/wk regardless of location/need
- Oregon "Break-Even": \$18.25/hr
- Umatilla County Avg. Wage: \$19.99/
- Washington County Avg. Wage: \$5. 70/h

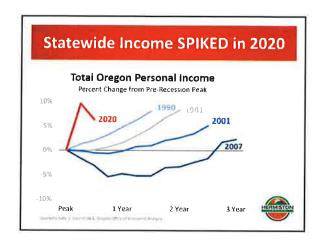

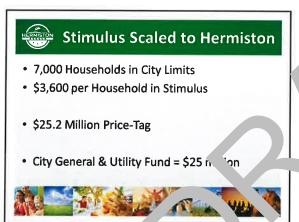

Direct Stimulus Payments

- "Blunt": \$1,800 regardless of location/need
- Hermiston Med. Household Income: \$58,000
- 2-Person Household Stimulus: \$3,600
 - If no job-loss: "Income" increased 6.2%
 - Job Loss may have been offset by Extra Unemployment

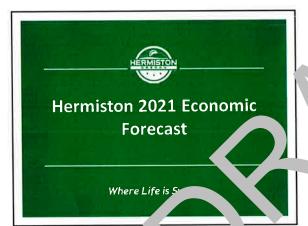

Targeted Business Assistance

• Movie Theater: Closed since March • Bowling Alley: Closed nearly as long

• Property Tax Relief: \$103,000 \$60,000 • Gift Certificate Purchases:

Meyer Distributing

- In Progress since 2017
- Acquired 40ac to accommodate 600,000SF
- "Phase 1": Begin Construction Spring '21
 - 170,000SF
 - 50-60 Full time Employees (200 @ Build ut?)
 - 10 Outbound Trucks per day (30 @ ୮ .d-Out?)
- No Tax Incentives

Cloud Computing

Cloud Computing Regionally

- Regional Data Center Technicians: 400-500
- Umatilla County's 2019 Avg Wage: Up 4%
- "Information" added \$25M in payroll in 2019
- Region to see 50-100 Data Center Tech's in 2021

Demand Stimulus Policies

- 1% Drop in 30 Yr. Loan on \$249K Home - Saves \$139/mo.
- \$5,000 "Incentive" amortized over 30 Yr. - Saves \$24/mo.

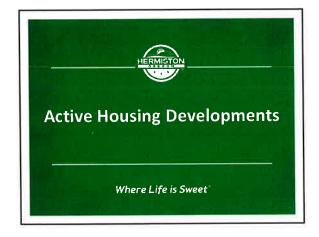

Supply Stimulus

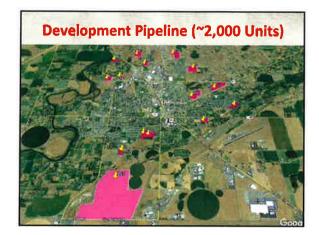

- Add "Developable" Land to Market
 - \$4.5M Water Tower & Piping
 - \$500K Theater Lane Extension
 - ReZone 50 Acres on Diagonal Blvd.
 - Public/Private Financing Utility Improvements
- · Housing in "Development Pipeline"
 - -~500 Units (0-5 Year Horizon)
 - ~2,000 Units (0-20 Year Horizon)

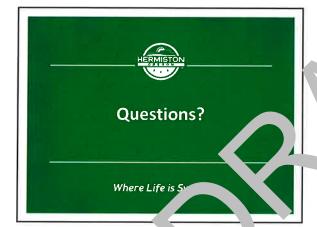

MEMORANDUM

TO: Mayor & Council

FROM: Mark Morgan, Assistant City Manager

DATE: January 11, 2021

SUBJ: 2020 Year-End Economic Review

I recently participated in the Chamber of Commerce's "Lunch & Learn" video series (available for playback on their Facebook page), where I gave a recap of the current state of Hermiston's economy, with a specific focus on local data. I felt that this local look was important, because if there's one thing that we have learned through the COVID-19 induced recession, it's that it was very 'spiky,' with some communities and households financially devastated, while many others experienced no financial difficulties and in fact saw their incomes rise significantly.

Mayor Drotzmann asked that I synopsize my presentation in to mem normat for all of you. I hope that you all find this information to be useful in making policy decision. To 2021. If any of you have any questions after reading this, I am more than happy to discuss them with you.

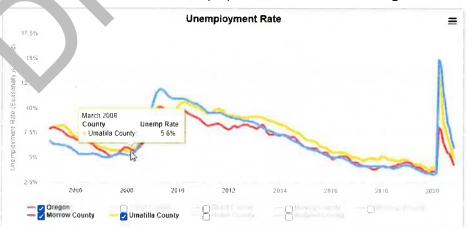

Hermiston Fared Relatively Well in 207

I mentioned the 'spiky' nature of the COVID-19 recess " impact on different communities and households. It's important to note that most of what I outline is e is specific to the Hermiston community as a whole; recognizing that, even in Hermiston, it 'live at house is 'ds likely had very different outcomes.

Local Unemployment Rate is Historically and (Three in November)

Umatilla County's unemployment rate. Nov. pber, 2–20, which <u>included</u> the return of some of the most stringent economic restrictions from the Governor, vols 5.0%. That is historically an incredibly good number for Umatilla County. In a case of you quely we forget," I just point out the graph below which is from the Oregon Employment Department, and charts unemployment back to 2005. Although Umatilla

County clocked an astonishing 3.7% UE ra. in December, 2019, think many of us forget that the County didn't come down to 5.0% (where we are currently) until January, 2017. When we look further back in time, that's when we can see the historical context of our current UE rate.

Umatilla County's best unemployment figure in the lead-up to the "Great Recession," was 5.6% in March, 2008. Put another way, in the data window that we have available, back to 2005, our community had never experienced an unemployment rate as good as it is now (5.0%) for the 12 years between 2005 and 2017.

Total Jobs Holding Steady

Any discussion of the unemployment rate immediately triggers the valid response that the UE Rate doesn't account for "discouraged workers," which are those people who have given up looking for work. Although that is certainly a real phenomenon that the UE Rate only counts those people who are out of work, but are actively searching, I would argue that even with that, we are still able to use the UE Rate for valid comparisons over time. Since the 'discouraged worker' phenomenon is always there, we are able to discount that, and still show that the current UE Rate is historically good.

To account for 'discouraged workers,' we have to look at Total Non-Farm Employment during a time of similar unemployment, and during the same time of year to off-set seasonal variations in employment. So when we look at total employment in November, 2020, county-wide we had 27,800 jobs; that's compared to November, 2016, when the UE was just a shade over 5.0%, when county-wide jobs totaled 28,200, for a deviation of approximately 400 jobs, or about 1.4% reduction in total employment. However, I believe a major factor at play has less to do with people unable to find work, and more to do with the fact that they cannot work because they have to stay home with children doing distance-learning.

Hermiston-Area Unemployment Rate is likely better than the Canty-Cate figure

The most refined "real-time" data that we have is only reposed on a county-wide basis, so there is no way to break-out Hermiston's November, 2020 unemployment rate individua. However, I believe that the west-end of Umatilla County is likely experiencing an inemply ment rate closer to Morrow County's. The west-end of the county simply shares much more single characteristics with Morrow County, in value-added ag processing, than it does with the rest of Unatilla County. Additionally, the largest individual employer in Umatilla County, Wildhor, Remark Casa, a, with well over 1,000 employees, is

located well outside of the Hermiston area, and exists in an industry which bore one of the worst effects of the necessary closures to slow the spread of the vi as.

iemployment Rates							
	Un	tilla County	Morrow County	Oregon			
oril, 2		13.9%	8.0%	14.9%			
Novem 2020		5.0%	4.3%	6.0%			

Hermiston Benefitte from Low Exposure to "Hospitality"

Many of you have probably heard my low opinion of focusing too much economic development resources on hospitality & tourism. My main reason to be averse to it is that our 'opportunity cost' is simply way too high because we lack truly catalyst-level tourism assets (i.e. a ski resort, a navigable lake, a major tribal casino, etc.) while we are very lucky to have high-value crops which require local processing, excellent rail/highway infrastructure, access to two trans-continental gas pipelines, immediate access to the PNW Fiber Optic backbone, and many others. While the cost of trying to develop a catalytic tourism asset is high, the real cost in directing resources that way is in the missed opportunities from not directing resources to our real existing assets.

My second reason to be wary of tourism had always been that it compounds the local negative effects during a recession. What's the first thing households cut from their budgets when things get tight? Dining out, family vacations, etc. So this dynamic means that if you're experiencing an economic contraction unrelated to tourism, you'll soon get hit with a "second wave" as households pull back on that type of spending.

NAICS Classifications Show Low Exposure to "Hospitality"

Although the Unemployment Rate is reported quickly, but on a broad county-wide level, we are able to dig more granularly in to other economic figures which lag behind by a couple of years. The US Census reports data on a zip code level basis, with the latest data available for 2018. Specifically, what I looked at early in the Pandemic was how much exposure Hermiston had to the hospitality industry by looking at how many jobs are here in that industry.

The North American Industry Classification System (NAICS) is an extremely robust numbering system for all job classifications in the United States. For this analysis, my shorthand for the "hospitality industry" is really combining the two NAICS clusters of, "Accommodation and Food Services," and "Arts, Entertainment, and Recreation."

I developed the table below by lumping together the Hermiston/Umatilla/Stanfield zip codes to generally describe the "Hermiston Area." However, I only pulled out the Permieton Zip Code for comparison because individually it is actually geographically larger than the three West-End code areas, and due to that size/distance, it didn't seem comparable to lump in places are Pi. Rock or Athena/Weston in to Pendleton's figures.

Hospitality Industry Economic \isk f \posure by Area							
Area	% All Jobs "Tou	rism" Relate	Total All Jobs in All Industries				
	2008	7018	2008	2018			
Umatilla County- Total	10.8%	11.	28,790	31,057			
Hermiston/Umatilla/Stanfield Zips	7.5%	1%	13,110	15,193			
Pendleton Zip	16	19.1%	11,250	11,006			
Oregon- Total	.6%	1.4%	1,668,000	1,904,000			

^{*&}quot;Tourism" related jobs determined as all jobs classif in the NAIC attenuities of comodation & Food Services," and "Arts, Entertainment, & Recreation."

The figures above show us reasonings, by the simple fact of the matter is that Hermiston, with only 8.1% of all jobs being in the two pospitality industry segments, has about 40% fewer jobs in the "Hospitality" industry the if we were closer to the statewide average of 11.4% of jobs in hospitality. When I saw Umatilla Count, exposur at 11.6% in hospitality, despite nearly half of all jobs county-wide being in the Hermiston area, the symbol county in the Pendleton zip code to see how much it was truly dragging that figure up. I was switted to see that nearly 1 in 5 jobs in the Pendleton zip code (which includes Wildhorse) are in hospitality. This means that workers and businesses in Pendleton were almost 2.5 times more likely to be directly impacted by disruptions in restaurants, hotels, etc.

Hermiston "Hospitality Industry" Is Actually Growing

Despite my negative attitude toward hospitality as an economic development tool, I will say that I do think that it has it's place; we just have to be realistic about what that means for Hermiston, and try to maintain a healthy balance to maintain a diversified economy. So with that said, the numbers above actually do show overall growth in Hermiston's Hospitality figures; it's just that we added 2,000 jobs between 2008 and 2018, so the gains in hospitality alone don't stand out as much. Several hospitality related developments which occurred in the 2008-2018 timeframe were addition of Comfort Inn & Suites (2008), expansion of 16 rooms at Travelodge (2016), completion of Eastern Oregon Trade & Event Center (2016), opening of Holiday Inn Express (2018), opening of Maxwell Event Center (2018), along with a number of restaurant additions.

COVID-19 Economic Response from the City

City Staff, and I'm sure many of you, have been pressed by constituents about what the City's response to the economic impacts of COVID has been. Ultimately, from a very early stage of the pandemic, it became clear that the economic impacts to Hermiston would be *relatively* small (see above), and also that (despite whatever your favorite cable-tv talking head says) the Federal Government and Federal Reserve's responses have been so swift, massive, and blunt that it completely dwarfs anything that local taxpayers could do through the resources that the City has at our disposal.

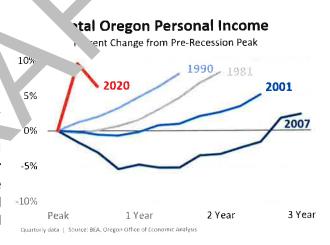

\$600/Week Extra Federal Unemployment Benefit

The CARES Act in the Spring included additional payments of \$600 per week to those experiencing unemployment on top of what those benefits would have already been. That's \$600 per week extra regardless of whether you were earning \$11/hr minimum wage in Hermiston, or \$100/hr managing a hotel in Manhattan. This is one of the points about the 'bluntness' of the Federal Response.

Each state has different calculations for how unemployment benefit are paid, with some states having more generous or less generous benefits. When I calculated the ir pa of an additional \$600/week in to Oregon's unemployment calculation, it meant that a laid-off worker we breaking even if they earned \$18.25/hr prior to the layoff. For a sense of what that me is, Umatilla Cupity's 2019 Average Annual Wage works out to \$19.99/hr. This means that if the average worker in Hermiston did happen to get laid

off, they had nearly all of their income replaced through unemployment, and in fact a large percentage of laid off workers earned more the before they were laid off.

Laid off workers earning more than 'eron they were laid off is just one explanation or this hind-blowing graph from the Oregon's the Franchiston December, which shows the personal incomes in Oregon were aually il Ut '% over the year after spiking 10% in Ju 2, which he attributes almost entirely 2 the triple Federal Aid package policies for unemp. The triple Federal Aid the Paycheck Protection Progra

\$1,200 and \$600 Stimulus Payments

In another incredibly blunt (and deceptively massive) policy, the CARES Act in the Spring, and the federal aid package approved in December provided most taxpayers with direct cash payments of \$1,200 and \$600 per taxpayer. Again, those figures were bluntly applied across the country, regardless of any local cost of living differences. This means that a theoretical 2-person household received \$3,600 in direct cash payments from the two payments. When you consider that Hermiston's Median Household Income is \$58,000 per year, and the fact that a very large number of households in Hermiston experienced either no job loss, or had their income fully replaced with the unemployment supplement, that median household saw their income jump 6.2%.

The numbers above show how blunt the stimulus payments were, but it was also deceptively massive in terms of cost. To scale it to estimate what that means for Hermiston, I know that there are 7,000 households in the city limits of Hermiston, our average household size is 2.7 people, and only about 5%

of the population earns above the \$150,000 income phase-out to receive the benefit. I also know that dependent children counted for \$500 each in the CARES Act, and \$600 each in the December stimulus. Taking all of that together, I think a conservative estimation would be to assume the average household received \$3,600 between the two programs. That figure allows us to let the 0.7 average dependents offset the fact that 5% of households received a scaled version, or nothing at all.

Using my assumption of an average of \$3,600 per household, I believe the 7,000 households in Hermiston received a cumulative total of approximately \$25 million in stimulus cash in 2020. Extrapolating that out a bit, based on the population of 40,000 people living within a 10-mile radius of downtown, I estimate that the greater Hermiston area received a cumulative total of approximately \$52 million in direct stimulus payments.

Direct Local Tax/Rate-Payer Assistance from the City?

Bringing this all back to the question of what was the City's response to help households during the pandemic; I think you can see that anything the City could have dor would have been a drop in the bucket compared to the Federal response. The Stimulus Program all cost Federal taxpayers \$25 million just in the city limits of Hermiston. For context, the entire City of Hermiston General Fund is \$15 million, while the entire Utility Fund is \$10 million. For the City to provide something quivalent to just the federal stimulus, we would have had to saddle the future tax argument rate payers with abb equal to 100% of our annual budget.

Direct Business Assistance From "the City"

The City did engage in a very targeted form of direct with the Care with the County in June to offer \$5,000 business assistance grants. The County with the County in June to offer \$5,000 business assistance grants. The County with the City of Hermiston pledged \$180,000 to the program. We worked with the County to have them draw from their allocation first, with the city's combination coming in behind to cover any applications which weren't covered by the County's. In the city's combination applications from the 97838 zip code, and awarded all but one, for a total \$1545,000. This meant that the City was able to "keep our powder dry" to focus our resources to be hardes, it but esses.

I had been having conversating with both the movie theater and the bowling alley since the early Spring. The movie theater in particulative active pessimistic about his ability to survive the closures. Once we made it through the general ausiness assistance grant cycle, I re-contacted the theater and bowling alley about more significant assistance. Ultimately what we settled on was to provide each with cash equal to their previous year's property tax bills (\$103,000 total), and to purchase \$30,000 of gift certificates from each of them. We have since been pushing those gift certificates out through the Library and Parks & Rec as incentives for participation in various programs. Both businesses have been very appreciative of the assistance, and I hear positive feedback that our strategy of leveraging gift certificates to both market the businesses and drive exponential utilization is working.

Surely our strategy of providing \$163,000 to just two businesses will be questioned by some, but I still believe that, in contrast to the Federal programs, this was the most economically efficient use of targeting our limited resources for maximum long-range return. The bowling alley and movie theater are unquestionably our two largest private sector "recreation/leisure" businesses that we have in the community. I believe that they truly function as an "anchor" economic asset which helps to support local restaurants and retailers much more than any individual restaurant does the other way around. This is because without one, or both, of those amenities, it simply provides one more reason for Hermiston

households to make a day out of going up to the Tri-Cities to watch a hockey game, go to a movie, etc., and while they're there, they'll also go shopping at Target, and have a meal at a restaurant there. Simply put, keeping the movie theater and bowling alley helps us limit the "leakage" of local dollars to restaurants and retailers in the Tri-Cities and keeps those dollars here.

2021 Economic Forecast for Hermiston

Locally, as the data shows above, the Hermiston area is basically already "back" to where we were in the two years prior to the pandemic. I think as vaccination rates increase, K-12 education will return to inperson learning, and that will result in a significant bounce-back simply from education-related services alone (i.e. bus drivers, meal-prep, etc.), and the return to the workforce of people who have chosen to stay home with children during comprehensive distance learning.

Meyer Distributing (160,000 Square Foot Warehouse)

I've been working with Meyer Distributing since July, 2017, and while they have been very good partners, they have been very methodical. I am very happy to report that they have now in to detailed site-planning and permitting for the first phase of their master-planned warehouse poeration. This first phase will be 160,000 square feet, with the overall site capable of accommodating a full re build-out to 600,000 square feet. I'm hopeful that we will see ground breaking on this varieties some the in the first half of 2021.

This operation is very much a "warehouse" versus a Distruction Center." Those terms are my distinctions so that people scale their expectations. This or ration distributes vehicle and RV parts to various customers across the country, and those as of procests have much longer "shelf life" than products which go out of the Wal-Mart DC, for example. This means that employment and truck traffic will both be smaller than the Wal-Mart DC, even it when it reaches 600Ksf, which is half the size of the Wal-Mart DC.

This operation is expected to employ bour 30 sephouse workers in the first phase, which could scale up to as many as 200 at the full 600Ks. wild-out. Additionally, this operation is likely to only see about 10 outbound trucks per day in the first passe; which is exponentially fewer than the Wal-Mart DC, and should hardly be notice alle from a traffic standpoint.

This operation is not receive any kind of Enterprise Zone property tax incentives. I have already been critically questioned about the by another local taxing jurisdiction, and I'm sure that when the announcement of ground-breaking makes the newspaper you will hear constituents incorrectly complain to you about tax incentives. Simply put, Meyer Distributing never asked about tax incentives, so I never offered any.

Cloud Computing (In Hermiston)

As you are all aware, we have an approved Enterprise Zone agreement in place with a \$2B cloud computing investment, which will be constructed within the City Limits. Unfortunately, due to a combination of the company's extreme secrecy and market conditions, I still have no real definitive information for when ground will be broken. However, I doubt that it will be in calendar year 2021, but we are getting indications that work is likely to begin in earnest in 2021 on site development planning and engineering.

Cloud Computing (Regionally)

The Cloud Computing industry continues to expand regionally, and that is having a direct and noticeable impact on employment and wages. Based on the multiple data sources that I have available, it appears that direct Data Center Technicians located in the Boardman-Hermiston-Umatilla region now stands in the ballpark of 400-500 jobs. That figure does not include things like construction, security, etc. The wages paid for those positions is beginning to move the needle in our local data. According to numbers released for 2019, the average county-wide wage in Umatilla County rose by 4% in 2019. A big driver of that was the addition of approximately \$25 million in total payroll in the "Information" sector, which is basically Data Centers. I anticipate, between the facilities in Boardman, Umatilla, and Hermiston, that we will see between 50 and 100 more data center technician positions come online in 2021.

Housing Boom

Hermiston saw our highest single-year of new single-family home construction since 2006 in 2020, with 101 new homes. For context, that's compared to around 70-80 the previous few years, and around 30-50 per year in 2012-2016. Similar to my points about anything that we can do locally to assist households through the COVID recession being exponentially small, the action of the Federal Reserve with regard to interest rates is probably 80% responsible for our housing boom in 200.

For context, average 30 year fixed-rate mortgages in Decemer, 2019 was 3.72%, and have fallen to 2.77% in November, 2020. If you account for that or the average hon, sale price in Hermiston (\$249,000), it works out to a savings of \$139 per month or the biject, or roughly \$50,000 over the life of the mortgage. Meanwhile, if we did something like Morro of cunty had done recently and gave home-buyers \$5,000 to reduce their cost, that would only decreate their monthly mortgage cost by \$24. Additionally, when we recognize that there are approximately \$1.5 million per year. Sometimes we have to just accept that we are at the will of much more powerful forces in the world of sobal france.

I say interest rates are 80% responsib. for the housing boom because I believe that the work that Council and staff have done over the receivers ensure an adequate supply of development-ready land existed with interested developer on the piptine has allowed us to "strike while the iron's hot" and let the private sector respond when the conditions are right.

Housing "In the Pipeline"

Although I can't tell what the Fed IIII do with interest rates in 2021, I feel that we are likely to remain ontrack to see new housing development in the range of 70 to 100 new housing units in 2021, and for the next few years at least; if conditions remain good.

- Highland Summit: Monte Vista Homes appears to be nearly complete in finishing the last two phases of this subdivision. There appears to be only 5-10 incomplete/un-sold homes in there, with active building taking place. These homes appear to be priced at the higher-range of the current market with a 3 bed, 2 bath 1,600SF home going in the range of \$280,000.
- Theater Park: Monte Vista Homes claims to have the first half of this 50-unit subdivision completely sold-out, with significant building taking place. I anticipate heavy building to continue through 2021, with the entire subdivision nearly built out by the end of 2021. These homes appear to be priced slightly lower than their Highland Summit development, with the same home listing closer to \$260,000.

- Cimmaron Terrace (Townhomes): This development off of E. Theater & NE 8th continues to construct new 4-plex townhomes which appear to all be for the rental market. The development appears to still have approximately 16 units (4 buildings) remaining in it's currently approved phase, and we are likely to see those built in 2021.
- Cimmaron Terrace (Single Family Homes): Olin Homes has purchased most of the finished lots in this 100-home subdivision south of E. Theater, and currently has about six homes in various stages of completion. These homes appear to be priced a bit higher than Monte Vista's two subdivisions, with the same home going for closer to \$300,000.
- Wolf Run: Frank Gehring is nearly built-out in this subdivision off of Gettman Road, which has been under construction for a year or two now, and has broken ground on the second and final phase, which will include 10-15 homes. These homes appear to be priced similar to Olin Homes, with the typical home being in the \$300,000 range.
- Desert Sky Estates: Paul Burns continues to build 5-10 homener year in this subdivision off of S 1st place. There appears to be 10-20 un-built lots remaining, an augh there has been interest in developing an additional significant phase soon. There homes apport to be priced similar to Olin Homes, and Wolf Run, with the typical home being in the \$300,000 reage.
- Santiago Estates: This 205 home manufactured new park has been doing site-work on their property off of Diagonal, which includes the former lead Start Bus Barn, since the Fall. The developer appears to be more interested in the containment than in speed. So although this development has been very methodical, think it solutely progressing toward seeing new homes begin going in there mide the 202 mis development is certainly what I would consider to be market-rate affordable housing. The developer will charge space rent, but has the equivalent of covenants which engage that a product similar to what comes out of Marlette Homes goes in there. He expect the cost of the typical home to be approximately \$90,000 (not accounting for month, that for expace). This business model has really picked up in Hermiston since about 2016, when find hing trictions on manufactured homes appear to have changed. We have seen a proximately 1-20 manufactured homes placed in parks similar to this each year since about 2016, the the expectage time parks nearing capacity. I would anticipate this development to fill that market for he for eseeable future, with probably 20-30 homes placed each year for upwards of 10 years.
- Highland Meadows: This 30 home subdivision recently broke ground on the first 18-home phase off of SE 9th & E Highland. The developer is closely related to the developer of Wolf Run, and all indications are that the product and timing of build-out will be very similar to Wolf run. I believe we will see flatwork completed this Spring, with a handful of homes constructed in 2021.
- Legacy Crossing: This 100 home subdivision off of NE 4th & Punkin Center is being developed by Monte Vista Homes (see Highland Summit and Theater Park). The developer is finalizing approvals for their first 30-home phase, and I anticipate seeing them break ground on that phase this Spring, with homes being constructed rapidly in 2021. Depending on the speed of closing-out their Theater Park development, and the uptake of the first phase, I wouldn't be surprised if we also see ground broken on an additional phase of this subdivision before the end of 2021.

- Diamond Run: This 147 home subdivision bounded by Elm, Diagonal, and NE 10th is being developed by Lloyd Piercy, and continues to work it's way through the civil engineering approval process. Based on the pace of progress to date, it is hard to say whether this development will actually break ground in 2021, or will be marketed as an approved subdivision awaiting a homebuilder to buy the lots. But it is good to have a development of this scale this far along in the development process.
- Skyline Ridge: This 140 home subdivision off of W. Punkin Center and Geer Road made it's way through the development approvals process a couple years ago, and now appears to just be looking for a home-builder to buy the development. Again, it's hard to say whether this development will actually break ground in 2021, but it is good to have this development in the pipeline for when market conditions and the price being asked finally match-up.
- Grouse Ridge: This massive 955 home mega subdivision is being planned for the 353-acre former C&B Livestock site in SW Hermiston near the intersection of F adville & Highway 207. City staff has been working with the current owners/developers sin 2012, as the developers wrestled with how to make the development pencil-out, due to the moon utility extension needs. We gained significant traction in 2020 when the City rethered with the developers to hire FCS Consulting, a major consulting firm which works with many cities in the Northwest to develop System Development Charges and other development in act fees. This effort has finally yielded a concrete plan for the required off-site utility implements necessary, and has resulted in a menu of viable financing options; most of which replacements have been provided in the city helping to share the risk of development by public-private partner hip. To the evelopers finish digesting the final recommendation with their investors, I have the provided and the consider sometime in 2021 with regard to the provided and the pr
